Environ® LpH® and Environ Vesphene® Family of Disinfectants Update

Dear Valued Customer:

At the Biocidal Products Committee (BPC) meeting of 2-6 March 2020, chlorophene (ortho benzyl para-chlorophenol, or OBPCP) was formally rejected as an active ingredient to be used in any private area and public health area disinfectants (Biocidal Product Type 2).

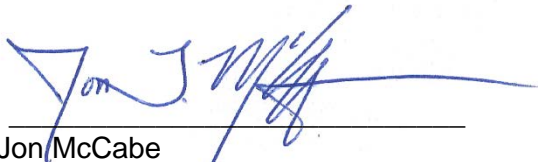

The minutes of the meeting have not been published yet, but they should be posted soon at the following [website](#).

We continue to anticipate the Environ LpH and Environ Vesphene Family of Disinfectants to be available for sale and shipment until March 2021. In addition, you can continue to use these products for six months after the stop sale date (September 2021).

While we do not expect any changes to this timeline, we will continue to monitor the BPC and will notify you if changes do occur.

Thank you for your continuing support of STERIS products. Please contact your local Account Manager or me with any further questions.

Best regards,

Jon McCabe
